LONGDOCUMENTMARKER

Every boundary between these tools taxes the work: the author shuttles context by hand, pasting sources into the chat, copying drafts back out, re-explaining to the agent what the other tools already know, and each switch costs time and attention. The agent's leverage is capped at whatever fragment fits in its window, and the researcher's time drains into moving material from place to place.Every boundary between these tools taxes the work: the author shuttles context by hand, pasting sources into the chat, copying drafts back out, re-explaining to the agent what the other tools already know, and each switch costs time and attention.
